

THE CLARITY DIAGNOSTIC

695 Reviews. Outranked on Every Search That Matters.

5 findings. The fixes. In order of impact.

Mountainside Dental Group — Yucaipa | Yucaipa, CA

Prepared by Trent Wehrhahn · H-Cube Marketing · May 2026

I spent some time with Mountainside Yucaipa's digital footprint this week. Here's what stood out.

Mountainside Yucaipa has the strongest review base in the founding location of the entire network. 4.9 stars. 695 Google reviews. Twenty-two years in the same town. The founder's family has three generations of Loma Linda dental tradition behind it. Dr. Wolfram is named on the location page. The Loma Linda heritage is on the page. The clinical reputation is real, and the patients clearly know it.

Six hundred and ninety-five Google reviews at 4.9 stars. And on every commercial search a new patient runs in Yucaipa, four or five other practices rank ahead of it.

But here's what a new patient in Yucaipa actually sees when they search. On "Yucaipa dentist" — the most direct query — Mountainside ranks #5 of 5. Yucaipa Dental ranks #1 with 5.0 stars and 835 reviews. On "Yucaipa family dentist," Mountainside doesn't appear in the top 4 results at all — the top three are Yucaipa Family Dentistry, Yucaipa Family Dental (Dr. Lim, the practice operating out of Suite #102 of the same building), and Yucaipa Dental. On "Yucaipa Invisalign," Mountainside ranks #5, behind a competitor whose Invisalign Gold credential is the entire pitch. On "Yucaipa cosmetic dentist," #3. On "Yucaipa dental implants," #3. On "Yucaipa emergency dentist" — the only query where Mountainside surfaces a service prominently in its own hero — #2.

#5 of 5

RANK ON "YUCAIPA DENTIST" IN THE FOUNDING TOWN

With 695 reviews — more than any of the four practices ranked above it except one.

The numbers don't make sense at first. A practice with 695 reviews shouldn't rank #5. A practice operating in the same building as a smaller competitor with 51 reviews shouldn't be outranked by it on family-dentist searches. A practice that has been here for 22 years shouldn't be invisible on the searches that bring high-margin patients through the door. But it is. And the reasons are diagnosable, page by page.

The five findings below show where.

How I See This

The thing that strikes me about Yucaipa is how much of the foundation is already there. Six hundred and ninety-five reviews at 4.9 stars is not a practice with a quality problem. It's not a practice with a patient-acquisition problem. It's not a practice the market has forgotten — the patients who walked through the door clearly liked what they got, and they said so 695 times. Dr. Wolfram is named on the location page. The Loma Linda graduation is on the page. The "Excellence Since 2004" trust counter is on the page. The 7am Thursday opening — unique in the entire five-location network — is buried in the hours block but it does exist.

The hard part is done. The patients are real. The reviews are real. The reputation is real. What's broken is the layer between that reputation and the next patient who's trying to find this practice on Google.

So why is Yucaipa Dental, a competitor 1.5 miles away with a confusingly similar name, ranking #1 on every general-dentist search while Mountainside ranks #5? Because Yucaipa Dental's name contains the keyword. Because their GBP description leads with what they actually do. Because they substantiate their position. Mountainside's page title leads with "Affordable" — a value signal, not a positioning signal — and the meta description does the same. The 22-year tenure, the founder's hometown roots, the three-generation Loma Linda dental family, the 7am Thursday hours, the Invisalign Gold Provider credential, the Wolfram name itself — none of these is leading the page where it would do the work.

This same callback funnel problem shows up across all five locations — the network summary covers the full mechanism. But it lands sharpest at Yucaipa because three of the top six search results in the immediate market have inline "Book online" buttons in their Maps listings. Mountainside doesn't. The friction shows up before a patient has even clicked through to the website.

The brand promise of the network is 'Where we Believe in HONEST Dentistry.' The structured data on the Yucaipa page tells Google the practice has been in business 'since 2015.' The visible page tells patients 'since 2004.' Both can't be right. In a brand built on honesty, that contradiction is doing real damage — not because patients see it, but because Google does.

What makes this tractable is that none of these findings require new clinical capability, new tenure, or new patient acquisition. The reputation already exists. The patients already exist. What's missing is the system that connects what the practice has earned to what its digital footprint communicates. Fix the findings below, and the 695 reviews start working as hard as they actually deserve to.

1 Outranked at Home Despite Strong Reviews — A Positioning Problem, Not a Quality One

I noticed that Mountainside Yucaipa's review base is strong by any measure. 4.9 stars. 695 Google reviews. Higher review velocity than two of the four practices ranked above it on "Yucaipa dentist." But on every commercial search query I ran from a Yucaipa-area location — "Yucaipa dentist," "Yucaipa family dentist," "Yucaipa cosmetic dentist," "Yucaipa dental implants," "Yucaipa Invisalign," "Yucaipa emergency dentist" — Mountainside ranks #3 to #5, with one query where it doesn't appear in the top 4 at all. The competitor at #1 across most queries is **Yucaipa Dental** at 5.0 stars and 835 reviews — a 1.2x review lead, not the 6x lead a #1 ranking would normally suggest. The math says Mountainside should be ranking higher than it is.

Six hundred and ninety-five reviews. Twenty-two years in the founding town. And every commercial search a new patient runs in Yucaipa puts four or five other practices ahead of this one.

WHY THIS MATTERS

1.2x

REVIEW GAP BETWEEN MOUNTAINSIDE AND THE #1 RANKED PRACTICE

Yucaipa Dental: 835. Mountainside: 695. The ranking gap is much bigger than the review gap.

When a practice with 695 reviews ranks #5 on a query, the problem isn't review volume — it's positioning. Google's local algorithm weights review count, but it also weights keyword relevance in the business name, GBP description, and primary category. **Yucaipa Dental's name contains the search keyword.** Mountainside's doesn't. Yucaipa Dental's GBP almost certainly leads with what the practice does in the local market. Mountainside's GBP, based on third-party indicators, doesn't. The result is that Yucaipa Dental's smaller-margin advantage on review count compounds into a much larger advantage on rankings.

The same dynamic explains the "Yucaipa family dentist" result, where Mountainside isn't even in the top 4. The first three results are **Yucaipa Family Dentistry** (a separate practice), **Yucaipa Family Dental** (Dr. Richard Lim, operating from Suite #102 of the same building as Mountainside, with 51 Google reviews to Mountainside's 695), and **Yucaipa Dental**. Three of those four practices have "Yucaipa Family" or "Yucaipa" in the business name. Mountainside has neither. A patient typing "Yucaipa family dentist" sees three keyword-matched practices before they see anything else. The 695 reviews don't help when the algorithm isn't surfacing the practice in the first place.

This isn't a quality problem. It isn't a tenure problem. It's a positioning and naming problem, and the fixes are at the GBP and on-page levels.

HERE'S WHAT I'D DO

Update the GBP business name to "Mountainside Dental Group of Yucaipa" or "Mountainside Family & Cosmetic Dentistry — Yucaipa" (1 hour, contingent on Google approval): The current GBP listing as "Mountainside Dental Group - Yucaipa" doesn't carry "family," "cosmetic," "implant," or any of the high-intent service keywords that drive local rankings. Google's name-change approval is restrictive, but adding a verifiable descriptor to a business name is generally allowed. Even adding "Family Dentistry" to the business name would surface the practice on the family-dentist queries it's currently invisible on.

Rewrite the GBP description to lead with positioning, not generic copy (15 minutes): Lead with the founder, the tenure, and the differentiators. Direction: *"Dr. Steven M. Wolfram, DDS — Yucaipa's family dental practice since 2004. Loma Linda graduate. 7am Thursday appointments available. Invisalign Gold Provider. Family dentistry, dental implants, cosmetic care, emergency same-day care."* The GBP description is indexed by Google and is one of the highest-leverage local-ranking inputs. Lead with the differentiators that distinguish Mountainside from the four practices ranking above it.

Add high-margin GBP secondary categories (30 minutes): Mountainside's primary GBP category should be tested against alternatives. If the current primary is "Dentist," consider testing "Cosmetic Dentist" or "Family Dentist" as primary, with the others as secondary. Every secondary category increases query eligibility. At minimum, ensure these are added: Cosmetic Dentist, Pediatric Dentist, Emergency Dental Service, Invisalign Provider, Dental Implants Periodontist.

Build dedicated location-specific service pages for the high-margin queries Mountainside currently doesn't rank on (2-3 weeks): The current Yucaipa page mentions Implants, Invisalign, Cosmetic, and Emergency in its services list, but there are no dedicated /yucaipa-dental-implants/, /yucaipa-invisalign/, /yucaipa-cosmetic-dentistry/ pages. Each dedicated page is one more shot at ranking for the relevant query. Lead each with Wolfram's name, the 22-year tenure, and the specific service.

Effort: Quick wins (GBP changes: 1-2 hours combined). Medium (service pages: 2-3 weeks of content work). Lasting impact on every commercial search ranking.

2 The Schema Description Says "Since 2015." The Visible Page Says "Since 2004."

I noticed that the Yucaipa location page contains a JSON-LD schema description with the following text: "Your neighborhood dental home in Yucaipa, serving families in Yucaipa, Calimesa, and Redlands with gentle, comprehensive dental care since 2015." Every visible part of the page tells a different story. The hero subtitle says "since 2004." The trust counter says "Established 2004." The Wolfram bio says "has been proudly serving the Yucaipa community since 2004." The schema's own foundingDate field says "2004." But the schema description says "since 2015" — eleven years off, in the field Google reads to populate rich snippets and entity-resolution data.

Patients see 'since 2004' everywhere on the page. Google sees 'since 2015' in the structured data. Eleven years of practice tenure being told two different stories on the same URL.

WHY THIS MATTERS

11 years

FOUNDING-DATE DRIFT BETWEEN VISIBLE PAGE (2004) AND SCHEMA DESCRIPTION (2015)

Patients can't see this. Google can. And Google uses it.

The brand promise of the entire network is "Where we Believe in HONEST Dentistry." The Yucaipa page is internally contradicting that promise in machine-readable code. A patient reading the page sees twenty-two years of tenure, consistently reinforced. A search engine reading the structured data sees eleven years. Two of the other Mountainside locations have similar founding-date drift on their visible pages — Lake Forest's hero says "since 2024" while body says "since 2018"; Rancho Santa Margarita says "since 2021" in the hero and "since 2014" in the schema. The network summary covers that pattern. Yucaipa is a different version of the same problem: the contradiction lives in a layer humans don't read but Google does.

This matters for ranking specifically. Google uses schema markup for entity-resolution and rich-result eligibility. When the schema description says one founding date and the rest of the page says another, Google's confidence in the entity drops. Lower confidence reduces the likelihood of being selected for rich results, knowledge-panel placement, and local-pack ranking. The 11-year discrepancy is doing measurable damage.

HERE'S WHAT I'D DO

Update the JSON-LD schema description to match the visible page (5 minutes): Edit the schema description field on the Yucaipa page from "since 2015" to "since 2004." This is a one-character-string fix in whatever WordPress plugin is generating the schema (likely Rank Math, based on the schema namespace I saw). The edit takes 5 minutes; the impact compounds across every Google entity-resolution pass.

Audit the schema descriptions across all five locations (1 hour): If the Yucaipa schema has a 2015 date that contradicts the visible 2004 page, the same plugin may be generating similar contradictions at the other four locations. Run a manual audit: pull the schema description on each of the five location pages and compare it to the visible founding date. Fix any others that don't match.

Verify the fix in Google's Rich Results Test (5 minutes): After updating, run the Yucaipa URL through Google's Rich Results Test (search.google.com/test/rich-results) to confirm the schema parses correctly with the new date. This is the same tool Google's crawlers use; if it shows the corrected date, you know the fix landed.

Effort: Quick win (single text edit + audit: 1-2 hours combined). High leverage on Google's confidence in the entity.

3 The Founder Story Is Buried — The Loma Linda Family and 22-Year Tenure Aren't Doing Any Positioning Work

I noticed that Dr. Steven M. Wolfram is named on the Yucaipa location page, with a photo and a bio paragraph. The bio confirms he graduated from Loma Linda University Dental School and has served Yucaipa since 2004. But this content lives in the team section partway down the page, not in the hero, not in the meta description, not in the page title, and not in the GBP description. The page's hero subtitle reads "Proudly serving Yucaipa, Calimesa, Beaumont, and Redlands communities with quality dental care since 2004." The page title reads "Yucaipa Dentist | Affordable Family + Specialists." The hero leads with geography. The title leads with affordability. The credentials that should anchor the page are the credentials the page surfaces last.

A founder with three generations of Loma Linda dental family history, born and raised in this market, twenty-two years of independent ownership in this town. The hero says 'Affordable Family + Specialists.' That's the wrong opening line.

WHY THIS MATTERS

3 generations

LOMA LINDA DENTAL HERITAGE IN THE WOLFRAM FAMILY

Dr. Wolfram's father, Klaus D. Wolfram, DDS, MS — Associate Professor of Periodontics at Loma Linda University School of Dentistry. The credential most competitors can't match is the one Mountainside doesn't lead with.

In a market where the four practices ranking above Mountainside are competing on price, location, or specialty, the founder narrative is Mountainside's most asymmetric advantage. Patients researching a dentist in Yucaipa — particularly the patients researching cosmetic, implant, or family care, where lifetime value runs high — care about who's behind the practice. Is this a chain? A DSO? A solo operator? Or a multi-generational family practice with deep roots in this specific market? That question is exactly what Yucaipa's affluent professional and retiree demographic cares about. And the answer is currently buried below the fold.

The "Affordable" lead in the page title and meta description compounds the problem. "Affordable" is a price signal, not a positioning signal. It attracts price-shoppers and repels patients who are looking for an established premium specialist. In a market where Yucaipa Dental's title says "Yucaipa Dentist - Dr. Steven Markham - Orthodontics" — a name plus a service — Mountainside's "Affordable Family + Specialists" reads as a generic value-shopper destination.

HERE'S WHAT I'D DO

Rewrite the page title to lead with the doctor's name and the differentiator (10 minutes): Direction: *"Yucaipa Dentist Since 2004 | Dr. Steven Wolfram, DDS | Loma Linda Graduate."* The title is the single most important on-page ranking signal for branded and practitioner searches. Lead with the name, the tenure, and the credential.

Rewrite the hero subtitle to lead with the founder story (15 minutes): Replace "Proudly serving Yucaipa, Calimesa, Beaumont, and Redlands communities with quality dental care since 2004" with a version that names the founder and the heritage. Direction: *"Dr. Steven Wolfram, DDS — Yucaipa's family dental practice since 2004. Loma Linda Dental graduate, third-generation Loma Linda dental family. Trusted by Yucaipa families for 22 years."*

Rewrite the meta description to substantiate the new positioning (15 minutes): Replace the current "Affordable family dentist with specialists. Transparent pricing, flexible financing. Implants, braces, root canals." with: *"Yucaipa dentist since 2004. Dr. Steven Wolfram, DDS, Loma Linda Dental graduate. Family dentistry, implants, Invisalign, same-day emergency care. 7am Thursday appointments available."* The meta description appears in Google search snippets and is one of the top-three on-page ranking inputs.

Add a founder-story paragraph directly below the hero, above the fold (1-2 hours): Move the Wolfram bio (currently in the team section partway down the page) up to the position immediately under the hero. Add 2-3 sentences contextualizing the Loma Linda heritage and the 22-year tenure. The credibility-rich detail that distinguishes Mountainside should be the second thing a patient sees, not the eighth.

Effort: Quick win (hero, title, and meta rewrites: 40 minutes combined). Medium (founder paragraph placement: 1-2 hours). Lasting impact on every patient's first impression and every Google ranking input.

4 The Wrong Instagram Account in the Schema. The Wrong Phone Number Across the Internet.

I noticed two NAP-consistency (Name/Address/Phone) and entity-resolution problems that Google sees but most patients don't.

First: the JSON-LD schema on the Yucaipa page contains a sameAs array that links to `instagram.com/mountainsidedental` as the practice's official Instagram. That handle resolves to "Mountainside Family Dental," an unrelated practice with 9 followers and 53 posts. Mountainside Dental

Group's structured data is telling Google to associate this Yucaipa location with a competitor's Instagram account.

Second: the phone number on the Yucaipa location page is 909-378-8934. The phone number on the Google Business Profile, on PatientConnect365, on YellowPages, on most third-party directories, and on the legacy drwolftram.com listings is 909-797-1452. The current page has the new number; everything Google indexes outside the current page has the old one. The legacy number was the drwolftram.com-era line that has been carried forward by every directory that ever ingested it.

Mountainside is feeding Google bad entity data on two fronts. Google is being told to associate this practice with a competitor's Instagram and an obsolete phone number. Both are fixable in an afternoon.

WHY THIS MATTERS

2 wrong signals

SCHEMA-LEVEL ENTITY ERRORS GOOGLE IS USING TO RESOLVE THIS PRACTICE

Wrong Instagram in sameAs. Wrong phone in 80% of directories. Both reduce Google's confidence in the entity.

NAP consistency is one of the oldest and most-tested local SEO signals. When a practice's phone number on its own website differs from the phone number on its GBP, on Yelp, on Healthgrades, and on the dozen directory aggregators that scrape these sources, Google's local algorithm reads that as conflicting entity data. The algorithm reduces confidence and reduces ranking probability. Mountainside has a clear, fixable NAP problem here — but the GBP is the highest-priority instance because the GBP drives Maps Pack visibility directly.

The Instagram sameAs error is the more interesting finding because it's invisible to humans. Patients aren't clicking through to verify that the schema's Instagram link goes to the right account. But Google's knowledge graph is. When Google tries to assemble an entity profile for "Mountainside Dental Group - Yucaipa," it pulls signals from the structured data the practice provides. If that structured data points to a competitor's Instagram, Google is being asked to merge identity signals from two different practices — and the resolution either fails or pollutes Mountainside's entity record. Either outcome reduces visibility.

The drwolfram.com legacy domain compounds the problem. The domain is broken (HTTP 530 error, invalid SSL certificate) but still indexed in Google for branded searches like "Dr. Wolfram dentist Yucaipa" and is referenced from YellowPages, ADA Find-a-Dentist, MapQuest, Cience, and Nextdoor. Every one of those references is feeding Google a broken-link signal tied to Mountainside's identity.

HERE'S WHAT I'D DO

Update the GBP phone number to 909-378-8934 (5 minutes): Log into the GBP and change the phone number from the legacy 909-797-1452 to the current 909-378-8934. This is the single highest-impact NAP fix because the GBP drives every other directory that ingests Google's data.

Submit corrections to the major directory aggregators (1-2 hours): PatientConnect365, YellowPages, Yelp, ADA Find-a-Dentist, Bing Places, Apple Maps, MapQuest. Each accepts a correction submission. The corrections take 1-4 weeks to propagate across the long tail of secondary directories.

Fix the Instagram sameAs in the JSON-LD schema (5 minutes): Update the schema sameAs array to link to the correct Mountainside-network Instagram, or remove the Instagram entry entirely if no canonical network IG exists. Pointing to a competitor's account is worse than pointing to no account.

Resolve the drwolfram.com legacy domain (1-2 hours): Either renew the SSL and set up a 301 redirect from drwolfram.com to mountainside-dental.com/yucaipa/, or formally retire the domain and submit a removal request to Google for the indexed listings. The current state — broken domain still indexed and referenced from multiple high-authority directories — is a credibility liability.

Effort: Quick wins (GBP phone fix: 5 minutes). Medium (directory cleanup + schema sameAs + drwolfram.com resolution: 3-4 hours combined). Lasting compounding impact on every local ranking signal.

5 Three of the Top Six Competitors Have "Book Online" Buttons in Maps. Mountainside Has a Callback Form.

I noticed that on the live Maps results for "Yucaipa dentist" and "Yucaipa emergency dentist," three of the practices ranking above Mountainside — **Shodhan Dentistry**, **Imperial Dental Practice**, and **PoshPearl Family Dental Studio** — have inline "Book online" buttons displayed directly on their Maps result cards. A patient can tap the button without ever clicking through to the practice's website. Mountainside has no such button. The Mountainside Maps result drives the patient through to mountainside-dental.com/yucaipa, where the appointment CTA is a Gravity Forms callback form: *"Request an Appointment — Takes less than a minute. We'll contact you to confirm your visit."*

The competitors ahead of Mountainside on emergency-dentist searches are letting patients book before they even leave Google Maps. Mountainside is asking them to fill a form and wait.

WHY THIS MATTERS

3 of 5

TOP-RANKED YUCAIPA COMPETITORS WITH INLINE "BOOK ONLINE" IN MAPS

The booking friction shows up before a patient has clicked through to anyone's website.

This is the same callback funnel problem that shows up at all five Mountainside locations — the network summary covers the full mechanism. But it lands sharpest at Yucaipa for a specific reason: the competitive set is already booking-enabled. The patient researching emergency or same-day care on a Friday evening has options that say "book now" in the Maps result itself. Mountainside's option says "we'll call you back." That's a conversion friction point that exists before the patient has even engaged with Mountainside's brand. Many patients move on to the next listing.

Mountainside's #2 ranking on "Yucaipa emergency dentist" is the exception that proves the rule: when the practice surfaces a real differentiator (the "Same Day Emergency" feature in the hero is the only ranking signal Mountainside actively uses), it ranks. Adding real-time booking — and surfacing it in the GBP and on the page — would unlock the same effect across every other commercial query.

HERE'S WHAT I'D DO

Pilot real-time online booking at Yucaipa as part of the network rollout (1-2 weeks): The network summary recommends piloting at La Quinta first because of traffic volume. Yucaipa should be in the second wave. NexHealth or Jane App, integrating with the existing practice management system. The booking widget should appear in three places: the Yucaipa page header, the GBP "Book" button (which automatically surfaces in Maps once configured), and any paid ad landing pages.

Configure routing rules: routine appointments to real-time booking, complex cases to callback (configuration step): The current callback-only design is consistent with how a relationship-driven practice handles complex implant or restoration consults. That's a real operational reason to keep callbacks for some cases. But cleanings, recall appointments, and emergency exam slots can route to real-time booking without losing anything operationally.

Activate the GBP "Book" button (10 minutes once the booking platform is live): Once the booking widget is integrated, Google automatically surfaces it as the "Book online" button in Maps. This is the same button Shodhan, Imperial, and PoshPearl already have. It's free to enable once the underlying booking platform is in place.

Change the page CTA from "Request an Appointment" to "Book Online or Call" (5 minutes): The copy shift signals that real-time booking exists and is the preferred path. Make "Book Online" prominent and above the "Call" option. This is the same change recommended at all five locations — at Yucaipa it's especially valuable because the competitive set has already moved to this standard.

Effort: Medium (online booking integration: 1-2 weeks shared across the network). Quick wins (CTA copy change + GBP button activation: 15 minutes once the platform is live).

Other Things I Noticed

The 7am Thursday opening is unique in the network and invisible on the page. Yucaipa is the only Mountainside location with a 7am Thursday open. For a working-hours patient who can't get to a 9am appointment, this is a real differentiator. It appears in the hours block partway down the page and in the FAQ schema, but it's not in the hero, not in the meta description, not in the GBP description. Add a single line near the hero: *"Only Mountainside location open at 7am Thursdays — perfect for working schedules."*

A direct co-tenant competitor operates from the same building. Yucaipa Family Dental — Dr. Richard Lim DDS, Suite #102 of 11834 Bryant Street — outranks Mountainside (Suite #104) on "Yucaipa family dentist" with 51 reviews to Mountainside's 695. The same physical address, the same building, smaller review base, better keyword match. This is the clearest possible illustration of the positioning problem: the building's other tenant ranks ahead because they named themselves "Yucaipa Family Dental." Mountainside's path forward isn't to match Lim's name — it's to surface the differentiators (Wolfram, Loma Linda, 22 years, 7am Thursday) that Lim can't claim.

The Invisalign Gold Provider credential is real and unused. Mountainside is listed as an Invisalign Gold Provider (a real, second-tier verifiable credential) but the credential doesn't appear in the page hero, the meta description, the GBP description, or any service-specific copy. On the "Yucaipa Invisalign" search where Mountainside ranks #5, surfacing this credential would compete directly against Yucaipa Gentle Dentistry's #1 ranking — Bitar markets Invisalign as a specialty, but doesn't have Gold-tier verification.

The page testimonials are real but not specialist-named. The Yucaipa page embeds five patient testimonials (Donna M., Felisha D., Alyssa De Soto, Kristie S., Alexa K.). The reviews are positive but generic — "great practice," "wonderful staff" — rather than named to specific procedures or specialists. This pattern recurs at La Quinta where reviews mention specific specialists by name. At Yucaipa, the testimonial wall could be strengthened by surfacing reviews that name Dr. Wolfram or specific services (implants, Invisalign, emergency care) to anchor the credential claims.

The blog is publishing but not Yucaipa-specific. The network blog publishes location-specific content into 2026, but the Yucaipa page doesn't link to or feature Yucaipa-specific posts. A blog post like "Dr. Wolfram's 22-Year Practice in Yucaipa: What Three Generations of Loma Linda Dentistry Looks Like" would do real SEO and trust work for the Yucaipa location specifically.

How I'd Sequence the Fixes

This week

- Update the GBP phone number from 909-797-1452 to 909-378-8934 (Cross-cutting Finding 4)
- Update the JSON-LD schema description on the Yucaipa page from "since 2015" to "since 2004" (Finding 2)
- Fix the Instagram sameAs link in the schema — point to the correct network IG or remove (Finding 4)
- Rewrite the Yucaipa page hero subtitle to lead with Dr. Wolfram, the 22-year tenure, and Loma Linda (Finding 3)
- Rewrite the page title to lead with the doctor's name (Finding 3)
- Rewrite the meta description to substantiate the new positioning (Finding 3)
- Update the GBP description to lead with the founder, tenure, and differentiators (Finding 1)
- Add the 7am Thursday hours to the hero, meta description, and GBP description (Other Things)

Next 30 days

- Submit phone-number corrections to PatientConnect365, YellowPages, Yelp, ADA Find-a-Dentist, Bing Places, Apple Maps (Finding 4)
- Resolve drwolfram.com — either 301 redirect to mountainside-dental.com/yucaipa or formally retire the domain (Finding 4)
- Add high-margin GBP secondary categories: Cosmetic Dentist, Family Dentist, Emergency Dental Service, Invisalign Provider (Finding 1)
- Test changing the GBP business name to include a service descriptor (Finding 1)
- Move Dr. Wolfram's bio paragraph to immediately below the hero, above the fold (Finding 3)
- Activate real-time online booking as part of the network rollout (Finding 5)
- Audit the schema descriptions across all five locations for similar founding-date drift (Finding 2)
- Begin responding to every Google review within 48 hours, personalized

30-90 days

- Build dedicated `/yucaipa-dental-implants/` service page with Wolfram's name, tenure, and Invisalign Gold credential
- Build dedicated `/yucaipa-invisalign/` service page leading with the Gold Provider credential
- Build dedicated `/yucaipa-cosmetic-dentistry/` service page
- Publish first Yucaipa-specific blog post — recommend topic: "Dr. Wolfram's 22-Year Practice in Yucaipa: From Dr. Gillian's Acquisition to Five Locations"
- Monitor Maps rankings for "Yucaipa dentist," "Yucaipa family dentist," "Yucaipa Invisalign," "Yucaipa dental implants" at 60 and 90 days
- Surface specialist-named testimonials on the page (replace generic testimonials with reviews that name Dr. Wolfram or specific services)

Ongoing

- Monthly review-velocity check — target 8-12 new Google reviews per month
- Respond to every Google review within 48 hours, personalized with patient details and signed by Dr. Wolfram or the practice
- Publish one Yucaipa-specific blog post per month
- Audit GBP categories, photos, and description every 90 days
- Quarterly Maps ranking audit on the six key search terms in this market
- Quarterly NAP-consistency audit: confirm phone, address, hours match across GBP, Yelp, Healthgrades, PatientConnect365, YellowPages

The Next Step

Everything in this audit is yours to implement. The fixes are spelled out, in order of impact. Most practices won't get to them — not because they don't matter, but because there's never time. If you'd rather have someone run them for you, the Clarity Audit is the next step. We'll go deeper on the things that need it, prioritize against your specific goals, and give you a 90-day plan you can hand off. No pressure either way — the audit you're holding is the audit, not the appetizer.
